

use **AI**. keep your clients' data to yourself.

Prepare a copy of your document before sharing it with an AI chat. Anonyma helps you find personal data, review it and choose how to replace it.

Your document

Extract from an application

The applicant **Marta Verdi** ,
residing in **Catania** ,
tax code **VRDMRT80A41C351X** ,
requests that the decision be annulled.

The copy to share

Extract from an application

The applicant **PERSON_1** ,
residing in **PLACE_1** ,
tax code **ID_1** ,
requests that the decision be annulled.

The same extract with different data. Codes are illustrative; always review the selections.

Before the chat

A document can contain client and third-party data: names, addresses, identifiers, signatures and personal information. Prepare it for the request you intend to make to AI.

You remain in control of the result

Detection suggests selections. Review them, add anything missing and open the exported copy before sending it. Context and filenames may also identify someone.

Documents on your device

Redacted PDFs

Coded text and mapping

From a document to a copy.

Choose the output for your task: a redacted PDF or coded text that can be restored using its mapping.

01

Open

Native PDF: read its text. Scans and images: OCR, or text recognition. Available formats depend on the version.

02

Review

Review detected data. Add or remove selections; workflows with visual review also let you cover signatures, stamps and other areas.

03

Export

Create a separate copy. Choose the redaction colour where supported and inspect the exported file.

Redacted PDF

Extract from an application

The applicant [REDACTED],
residing in [REDACTED],
tax code [REDACTED],
requests that the decision be annulled.

Pages are rebuilt: content in covered areas is not included in the copy. Redaction is permanent; the mapping cannot restore that PDF.

Coded text

The applicant `PERSON_1`, residing in `PLACE_1`, requests that the decision be annulled.

Selected values become codes. Keep the mapping to restore originals; TXT contains text without images or layout.

From the AI response to original values

`PERSON_1` → Marta Verdi `PLACE_1` → Catania

Restoration uses your mapping and requires unchanged codes. Keep the mapping separate from the copy you share.

The four versions of Anonymama.

Choose where to start. Each version's features and requirements are described in its own guide.

01

Webapp

Documents in your browser

Open the website, import a document, review selections and export a copy. On first use, the browser downloads the model to your device.

[Webapp guide](#)

02

Local app

Review on your computer

Work on documents with visual review of selected areas. The documented Mac distribution is for Apple Silicon; read requirements and instructions before installing.

[App and requirements](#)

03

Chrome extension

Text in supported chats

Analyse text, review detected data and apply codes before sending. Keep the mapping to restore values in the response.

[Extension and chats](#)

04

CLI

Files and folders in the terminal

Repeat the workflow on files and folders with a command. Produces separate copies and reports. Follow the guide to start and always review the results.

[CLI guide](#)

OCR only

Extract text from PDFs, JPEGs and PNGs directly in your browser. Copy the text, download TXT or create a searchable PDF.

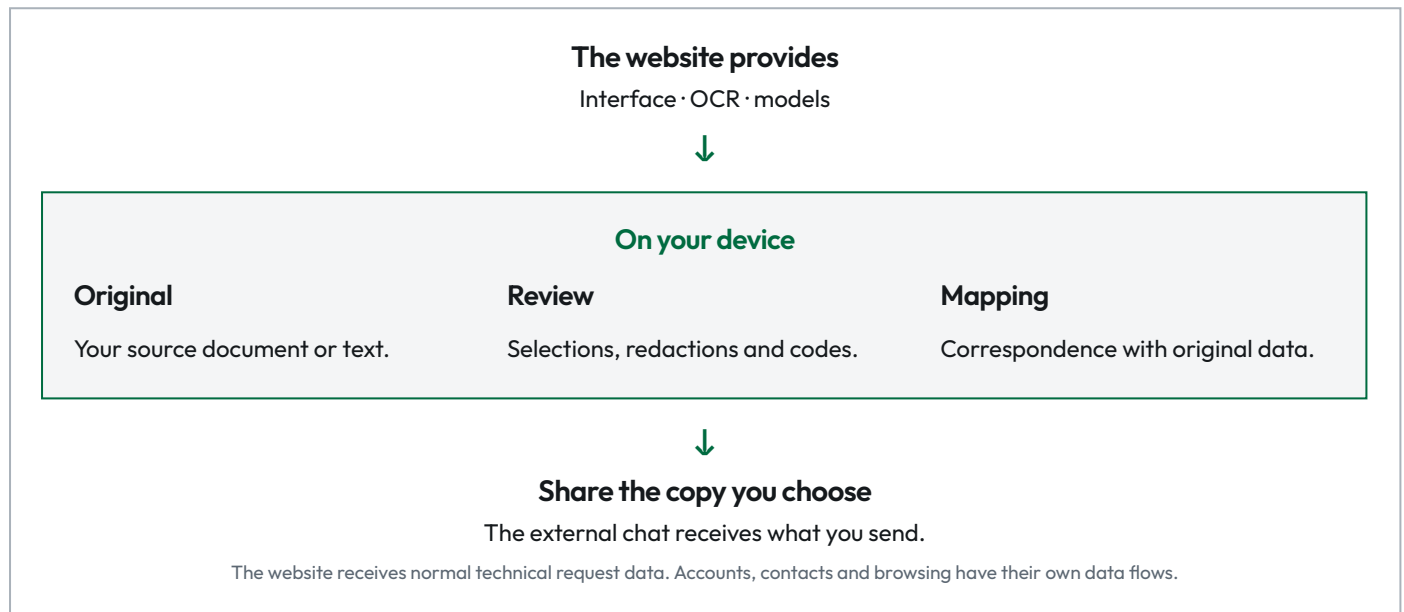

[Open OCR](#)

OCR makes text readable: original data remains in the output. Use the redaction workflow to remove it.

Your document stays on your device.

The local workflows described process documents and mappings on your device, without uploading them to Anonymama's servers.

Keep your mapping safe

Mappings contain original data. Export them when needed and keep them separately. Settings, models and mappings may remain in local storage depending on the version; the browser or user can remove them.

Review the context too

Names and identifiers are only part of the review. Personal circumstances, images, signatures and filenames may identify someone. Coded text and mapping still require this review.

Start with a sample document.

Open the webapp, try the workflow and inspect the copy. The guides describe requirements, settings and instructions for each version.
